## Revision History

Name	Date	Reason For Changes	Version
Bradley, Wen Rong	05/02/2025	Use Cases for Initial Requirements	1.0
Brandon, Wen Rong, Qi Cheng, Bradley, Jia Yuun, Aditi	19/02/2025	Adding more functional and non-functional requirements and their use cases	1.1
Wen Rong	06/04/2025	Final updates to all documentations.	1.2

# USE CASE DIAGRAM

# USE CASE DESCRIPTIONS

Use Case Name	Sign up
Actor:	User, Database
Description:	Allow new users to create an account
Preconditions:	User does not have an existing account
Postconditions:	New user account created
Flow of Events:	<p>S1: User opens web app without being signed in</p> <p>S2: User is brought to login page</p> <p>S3: User clicks on “Sign up” button and is redirected to sign-up page</p> <p>S4: User enters relevant details (full name, email, userID, phone number, car plate number) with the correct formats</p> <p>S5: User clicks “Create Account” and system stores new user information in the database</p> <p>S6: User is redirected to home page</p>
Alternative Flows:	<p>AF-S4: Invalid Input</p> <p>AF-S4-1: Username already registered</p> <ol style="list-style-type: none"> <li>1. App displays a cross “X” next to failed requirement</li> <li>2. App remains at step S4 until requirements are met</li> </ol> <p>AF-S4-2: Password strength error</p> <ol style="list-style-type: none"> <li>1. App displays “Please match the requested format.” message</li> </ol>

	<p>2. App remains at step S4 until requirements are met</p> <p>AF-S4-3: Email format wrong</p> <ol style="list-style-type: none"> <li>1. App displays “Please include an ‘@’ in the email address. ‘(email)’ is missing an ‘@’</li> <li>2. App remains at step S4 until requirements are met</li> </ol> <p>AF-S5: Email already registered</p> <ol style="list-style-type: none"> <li>1. App displays “Email already in use.” message</li> <li>2. App returns to step S2</li> </ol>
Exceptions:	<p>EX1: Database is inaccessible</p> <p>EX2: Network error</p> <ol style="list-style-type: none"> <li>1. App displays “Error. Not connected to the internet.”</li> </ol>

Use Case Name	Login
Actor:	User, Database
Description:	Allow user to log in
Preconditions:	<p>User has an existing account</p> <p>User has not logged in on device before</p>
Postconditions:	User is logged in and authenticated
Flow of Events:	<p>S1: User opens web app</p> <p>S2: User is brought to login page</p> <p>S3: User enters email/password</p>

	<p>S4: Authentication System hashes password and verifies login details with database</p> <p>S5: User is logged in successfully</p> <p>S6: User enters main page</p>
Alternative Flows:	<p>AF-S5-1: Login fails as password is invalid</p> <ol style="list-style-type: none"> <li>1. App displays “Credentials are incorrect. Please try again.” message</li> <li>2. Password field is emptied</li> </ol> <p>AF-S5-2: Login fails as email is invalid</p> <ol style="list-style-type: none"> <li>1. App displays “Credentials are incorrect. Please try again.” message</li> <li>2. Password field is emptied</li> </ol>
Exceptions:	<p>EX1: Authentication System/ Database is inaccessible</p> <p>EX2: Network error</p> <ol style="list-style-type: none"> <li>1. App displays “Error. Not connected to the internet.”</li> </ol>

Use Case Name:	Sign Out
Actor:	User
Description:	Allow user to log out of the app
Preconditions:	<p>User is logged in and authenticated</p> <p>User is on the main page</p>
Postconditions:	User is logged out and return to the login page

Flow of Events:	S1: User taps the “Sign Out” button  S2: App clears user session data  S3: User is signed out and redirected to the login page
Exceptions:	EX1: Sign-out fails due to a system error  1. App displays “There was an error signing you out. Please try again later.” message

Use Case Name	View Profile Page
Actor:	User, Database
Description:	Allow users to view their profile information
Preconditions:	User is on web app
Postconditions:	User can view and update their profile information
Flow of Events:	S1: User selects the “Profile” option from the navigation bar  S2: If logged-in, app retrieves the user’s profile data from the database  S3: App displays the user’s profile information including email, username, vehicle number plate, and other relevant details
Alternative Flows:	AF-S2: User is not logged-in  1. App is redirected to Login page
Exceptions:	EX1: Database error

	1. App displays “There was an error retrieving your profile. Please try again later.”
--	---

Use Case Name	Edit Profile Page
Actor:	User, Database
Description:	Extends View Profile Page by allowing user to change profile details
Preconditions:	User is logged in and on the profile page
Postconditions:	User profile information is updated
Flow of Events:	<p>S1: App displays the user's profile information including email, username, vehicle number plate, and other relevant details</p> <p>S2: User can edit their details such as email, password, name or vehicle number plate</p> <p>S3: User confirms changes and authentication system updates the database</p> <p>S4: Profile page is updated</p>
Alternative Flows:	<p>AF-S3: User cancels profile updates</p> <ol style="list-style-type: none"> <li>App returns to the Profile Page without saving any changes</li> </ol>
Exceptions:	<p>EX1: Profile update fails due to system error</p> <ol style="list-style-type: none"> <li>App displays “There was an error updating your profile. Please try again later.”</li> </ol>

Use Case Name	Change Password
Actor:	User, Database
Description:	Extends View Profile Page by allowing user to change password
Preconditions:	User has an existing account and is on Profile Page
Postconditions:	User password is changed
Flow of Events:	<p>S1: User clicks on “Change Password”</p> <p>S2: App requests user to enter existing password and new password</p> <p>S3: If no problems password is changed</p> <p>S4: App updates the database</p>
Alternative Flows:	<p>AF-S3-1: Current Password is wrong</p> <ol style="list-style-type: none"> <li>App displays window “Failed to update password. Please try again. Error: Old password is incorrect.” message</li> <li>App remains at step S2 until requirements are met</li> </ol> <p>AF-S3-2: New Password does not meet requirements</p> <ol style="list-style-type: none"> <li>App displays “Please match the requested format.” message</li> <li>App remains at step S2 until requirements are met</li> </ol>
Exceptions:	<p>EX1: Authentication System/ Database is inaccessible</p> <p>EX2: Network error</p> <ol style="list-style-type: none"> <li>App displays “Error. Not connected to the internet.”</li> </ol>

Use Case Name	Search car park location
Actor:	User, OneMap API, OneMap Search API
Description:	Allow users to search for specific car park locations
Preconditions:	User is on the searchpage
Postconditions:	User is presented with search results for car park locations
Flow of Events:	<p>S1: App asks user for location permission</p> <p>S2: App shows top 10 carparks nearby to user's location</p> <p>S3: User enters new address into search to find nearby carparks to new address</p> <p>S4: User can click on any car park in the list for more detailed information (see "View Car Park Informartion" use case)</p>
Alternative Flows:	<p>AF-S2-1: Location permission not granted</p> <ol style="list-style-type: none"> <li>1. No available carparks are shown</li> </ol> <p>AF-S2-2: User adjusts slider to show up to 100 carparks</p> <ol style="list-style-type: none"> <li>2. Number of carparks shown changes accordingly</li> </ol>
Exceptions:	<p>EX1: API rate limit exceeded.</p> <ol style="list-style-type: none"> <li>1. App displays "There was an overload of requests. Please try again later."</li> </ol> <p>EX2: Network error</p> <ol style="list-style-type: none"> <li>1. App displays "Error. Not connected to the internet."</li> </ol>

Use Case Name	Filter Search
Actor:	User, OneMap API, OneMap Search API
Description:	Extends search by allowing users to filter by “Free Parking”, “Night Parking”, “Availability”, “Height Restrictions”
Preconditions:	User is on the searchpage
Postconditions:	User is presented with filtered search results for car parks
Flow of Events:	<p>S1: User enters address and applies filters</p> <p>S2: App displays a list of car parks that are nearby and match the filters, including their names and general location information</p> <p>S3: User can click on any car park in the list for more detailed information</p>
Alternative Flows:	<p>AF-S2-1: User adjusts slider to show up to 100 carparks</p> <ol style="list-style-type: none"> <li>Number of carparks shown changes accordingly</li> </ol>
Exceptions:	<p>EX1: API rate limit exceeded.</p> <ol style="list-style-type: none"> <li>App displays “There was an overload of requests. Please try again later.”</li> </ol> <p>EX2: Network error</p> <p>App displays “Error. Not connected to the internet.”</p>

Use Case Name	View Car Park Information
---------------	---------------------------

Actor:	User, HDB Carpark Information API
Description:	Allow users to view information about HDB car parks (address, number of spots available, operating hours, multi-storey, height limit, basement, night parking, free parking, etc).
Preconditions:	User is on the searchpage
Postconditions:	User views the real-time availability and information of parking lots
Flow of Events:	<p>S1: User selects a car park from the list and clicks “View Details”</p> <p>S2: App retrieves real-time parking availability for the selected car park</p> <p>S3: App displays the parking lot details, including address, rates, operating hours, gantry height, and payment methods and more</p>
Exceptions:	<p>EX1: Network error</p> <p>App displays “Error. Not connected to the internet.”</p>

Use Case Name	View Car Park Availability
Actor:	User, Carpark Availability API
Description:	Allow users to view real-time availability of car parks
Preconditions:	User is on the searchpage and has available parking lots nearby shown
Postconditions:	User views the real-time availability of parking lots

Flow of Events:	S1: Real-time availability of car parks shown for all listed available parking lots shown (after searching/filtering is done)
Exceptions:	<p>EX1: Real-time data retrieval fails</p> <ol style="list-style-type: none"> <li>App displays “Unable to retrieve parking availability. Please try again later.”</li> </ol> <p>EX2: Network error</p> <p>App displays “Error. Not connected to the internet.”</p>

Use Case Name	FAQ Page
Actor:	User, Database
Description:	Allows users to provide feedback on their experience with the app
Preconditions:	User is on web app
Postconditions:	User obtains ParkSmart contact information, sees frequently asked questions (FAQs) and can submit feedback (“Feedback” use case)
Flow of Events:	<p>S1: User clicks “Support” in navigation bar</p> <p>S2: User is brought to support page and can email developers and see a list of FAQs</p>
Alternative Flows:	<p>AF-S2: If user is logged in and is an admin</p> <ol style="list-style-type: none"> <li>Admin is redirected to admin dashboard</li> <li>Feedback and reports are fetched by the system from the database</li> <li>Admin can see feedback, average rating and reports</li> </ol>

	<p>4. Admin can review reports and navigate directly to the post page where the reported post or comment is found</p> <p>5. Admin can delete reported posts or comments</p>
Exceptions:	<p>EX1: Database error</p> <p>1. Fails to retrieve feedback and reports, nothing is shown</p> <p>EX2: Network error</p> <p>1. App displays "Error. Not connected to the internet."</p>

Use Case Name	Provide Feedback
Actor:	User, Database
Description:	Extends FAQ page by allowing users to provide feedback on their experience with the app
Preconditions:	User is logged in and is on the Support page
Postconditions:	User's feedback is stored in the database for review
Flow of Events:	<p>S1: User scrolls down to feedback form</p> <p>S2: User enters name, email, message, selects a subject and gives a rating</p> <p>S3: User clicks "Submit Feedback"</p> <p>S4: App confirms submission with a window message "Thank you for your feedback. We appreciate your input."</p> <p>S5: Feedback is stored in the system for admin to review</p>
Alternative Flows:	AF-S3-1: Email is missing '@'

	<ul style="list-style-type: none"> <li>1. App displays message "Please include an '@' in the email address."</li> <li>2. Submission fails</li> </ul> <p>AF-S3-2: Input field is missing</p> <ul style="list-style-type: none"> <li>1. App displays message "Please fill out this field."</li> <li>2. Submission fails</li> </ul> <p>AF-S3-3: No rating is given</p> <ul style="list-style-type: none"> <li>1. Submission fails</li> </ul>
Exceptions:	<p>EX1: Feedback submission fails due to system error</p> <ul style="list-style-type: none"> <li>1. App displays "There was an error submitting your feedback. Please try again later."</li> </ul> <p>EX2: Feedback text exceeds character limit</p> <ul style="list-style-type: none"> <li>1. App displays "Your feedback is too long. Please shorten your message."</li> </ul> <p>EX3: Network error</p> <ul style="list-style-type: none"> <li>1. App displays "Error. Not connected to the internet."</li> </ul>

Use Case Name	Change Language
Actor:	User, Database
Description:	Allows user to change language of user interface
Preconditions:	User is on web app
Postconditions:	User interface language changed to preferred language
Flow of Events:	S1: User clicks "EN" dropdown in the header

	<p>S2: App dropdown displays the available languages</p> <p>S3: User selects a different language, and system retrieves translations from database</p> <p>S4: User interface language changed and system saves language chosen in local storage as a string</p> <p>S5: Language is constant when user navigates to other pages</p>
Alternative Flows:	<p>AF-S3: User clicks dropdown again and cancels language change</p> <ol style="list-style-type: none"> <li>1. No change in user interface</li> </ol>
Exceptions:	<p>EX1: Language change fails due to system error</p> <ol style="list-style-type: none"> <li>1. App displays “Unable to change language. Please try again later.”</li> </ol> <p>EX2: Database error</p> <ol style="list-style-type: none"> <li>1. App displays “Unable to change language. Please try again later.”</li> </ol> <p>EX3: Network error</p> <ol style="list-style-type: none"> <li>1. App displays “Error. Not connected to the internet.”</li> </ol>

Use Case Name	Swap between light and dark mode
Actor:	User
Description:	Allows user to enable light or dark mode
Preconditions:	User is on web app

Postconditions:	User interface colours changed
Flow of Events:	S1: User clicks sun (or moon) icon to enable dark (or light) mode  S2: User interface colours changed

Use Case Name	Access Forum
Actor:	User, Database
Description:	Allows user to access community forum to interact with other users and share experiences
Preconditions:	User is on web app
Postconditions:	User views posts from other users or successfully posts/comments
Flow of Events:	S1: User navigates to Forum Page  S2: App fetches recent posts from the Database  S3: User scrolls and views others' posts  S4: If user is logged in, he can make posts, comments, report post/comment (see included use cases)
Alternative Flows:	AF-S4-1: User is not logged in  1. User can only view posts 2. App displays message "Please log in to create a post."
Exceptions:	EX1: Database error

	<p>1. App displays “Unable to fetch posts”</p> <p>EX2: Network error</p> <p>1. App displays “Error. Not connected to the internet.”</p>
Includes:	Make/Delete Post, Report Post, Comment, Edit/Delete Comment

Use Case Name	Make/Delete Post
Actor:	User, Database
Description:	Allows user to make and share a post
Preconditions:	User is logged in and in the forum page
Postconditions:	User successfully posts a post
Flow of Events:	<p>S1: User enters title, content and attaches an image if he wants to</p> <p>S2: User makes a post by clicking ‘Create Post’</p> <p>S3: If there are no problems app creates a new document for his post and stores it in the database, with relevant attributes like id, title, content, image, username, date, comments array and deleted</p> <p>S4: User can edit posts he made by clicking “View Post” on his post then “Edit Post”</p> <p>S5: If user edits post, he can edit title, content and image</p> <p>S6: User is done editing and clicks “Save Changes”, post is updated</p>

	<p>Alternative Flows:</p> <p>AF-S3-1: Attachment has invalid file type or its size is too big</p> <ol style="list-style-type: none"> <li>1. Attachment is not uploaded and post is created without it</li> </ol> <p>AF-S4-1: User clicks “Delete Post” instead of “Edit Post”</p> <ol style="list-style-type: none"> <li>1. App pops up a window and asks, “Are you sure you want to delete this post?”</li> <li>2. User clicks “Yes” (if “No” skip 3 and 4)</li> <li>3. App sets the “deleted” status of the post in database to true</li> <li>4. The post is no longer displayed</li> </ol> <p>AF-S4-2: If user is admin account and post is not his</p> <ol style="list-style-type: none"> <li>1. Admin can delete all posts but not edit others’ posts</li> </ol> <p>AF-S6-1: Attachment has invalid file type or its size is too big</p> <ol style="list-style-type: none"> <li>1. Attachment is not uploaded and post is updated without it</li> </ol>
	<p>Exceptions:</p> <p>EX1: Database error</p> <ol style="list-style-type: none"> <li>1. App displays “Database error. Please try again later.”</li> </ol> <p>EX2: Network error</p> <ol style="list-style-type: none"> <li>1. App displays “Error. Not connected to the internet.”</li> </ol> <p>EX3: Post text exceeds character limit</p> <ol style="list-style-type: none"> <li>1. App displays “Your post is too long. Please shorten your text.”</li> </ol> <p>EX4: Post submission fails due to system error</p> <ol style="list-style-type: none"> <li>1. App displays “There was an error submitting your post. Please try again later.”</li> </ol>

Use Case Name	Report Post
Actor:	User, Database
Description:	Allows user to report post or comment
Preconditions:	User is logged in and in the forum page
Postconditions:	User successfully reports a post or comment
Flow of Events:	<p>S1: User clicks “View Post” on a post he wants to make a report on</p> <p>S2: User clicks the flag icon below a post or comment and text box opens</p> <p>S3: User enters reason for reporting and clicks “submit”</p> <p>S4: System stores report in database for admin to review</p>
Alternative Flows:	<p>AF-S2: If not logged-in or creator of post or comment is user</p> <ol style="list-style-type: none"> <li>Flag icon is not shown</li> </ol> <p>AF-S3: User clicks “Cancel” instead of “Submit”</p> <ol style="list-style-type: none"> <li>Text box closes</li> </ol>
Exceptions:	<p>EX1: Database error</p> <ol style="list-style-type: none"> <li>App displays “Database error. Please try again later.”</li> </ol> <p>EX2: Network error</p> <ol style="list-style-type: none"> <li>App displays “Error. Not connected to the internet.”</li> </ol> <p>EX3: Report text exceeds character limit</p>

	<p>2. App displays "Your post is too long. Please shorten your text."</p> <p>EX4: Report submission fails due to system error</p> <p>2. App displays "There was an error submitting your report. Please try again later."</p>
--	---

Use Case Name	Comment
Actor:	User, Database
Description:	Allows user to comment on other's posts
Preconditions:	User is logged in and on a post page
Postconditions:	User successfully comments on a post
Flow of Events:	<p>S1: User sees a post and has something to comment</p> <p>S2: User types comment in provided text field</p> <p>S3: If there are no problems user posts his comment by clicking 'Comment'</p> <p>S4: App stores his comment in the database by updating the document containing the post being commented on and appending a comment object into the "comments" array</p>
Exceptions:	<p>EX1: Database error</p> <p>3. App displays "Database error. Please try again later."</p> <p>EX2: Network error</p> <p>3. App displays "Error. Not connected to the internet."</p> <p>EX3: Comment text exceeds character limit</p>

	<p>3. App displays "Your comment is too long. Please shorten your text."</p> <p>EX4: Comment submission fails due to system error</p> <p>3. App displays "There was an error submitting your comment. Please try again later."</p>
--	--

Use Case Name	Edit/Delete Comment
Actor:	User, Database
Description:	Extends “Comment” by allowing users to edit or delete comments they made
Preconditions:	User is logged in and on a post page and has posted a comment
Postconditions:	User successfully edits or deletes comment on a post
Flow of Events:	<p>S1: User clicks pencil icon</p> <p>S2: Text box opens and user edits comment</p> <p>S3: User clicks “Save”</p> <p>S4: System updates comment in database</p>
Alternative Flows:	<p>AF-S1: User clicks trash bin icon</p> <ol style="list-style-type: none"> <li>App pops up a window and asks, “Are you sure you want to delete this comment?”</li> <li>User clicks “Yes” (if “No” skip 3 and 4)</li> <li>App sets the “deleted” status of the comment in database to true</li> <li>The comment is no longer displayed</li> </ol> <p>AF-S3: User cancels edit comment</p>

	<ol style="list-style-type: none"><li>1. Text box closes</li></ol>
Exceptions:	<p>EX1: Database error</p> <ol style="list-style-type: none"><li>4. App displays "Database error. Please try again later."</li></ol> <p>EX2: Network error</p> <ol style="list-style-type: none"><li>4. App displays "Error. Not connected to the internet."</li></ol> <p>EX3: Comment text exceeds character limit</p> <ol style="list-style-type: none"><li>4. App displays "Your comment is too long. Please shorten your text."</li></ol> <p>EX4: Comment submission fails due to system error</p> <ol style="list-style-type: none"><li>4. App displays "There was an error submitting your comment. Please try again later."</li></ol>
